Background AutoCAD, known as AutoCAD LT when first introduced, was developed by a team of commercial software engineers, drafters and artists. The early development team members (colleagues from other Autodesk products) created the first prototype of the app using the graphic and software tools of the existing DWG (or Desktop Graphic) product. The first official release of AutoCAD LT was in 1985, initially for Apple II computers running DOS (Disk Operating System) and CGA (Color Graphics Adapter) graphics, and later for the Commodore 64 and IBM PC compatible. AutoCAD LT was first available in a 256k (2Mb) memory version. When the Apple Macintosh arrived in the 1990s, Autodesk decided to port the application to this platform. AutoCAD LT was replaced by the current version of AutoCAD in 1994, and the original software package and user base was renamed Autodesk Inventor. Since its introduction, AutoCAD has become the world's best-selling CAD application. AutoCAD is a category of "apps" in the AppStore; users need a subscription to use them. If you buy AutoCAD from the AppStore, you also get access to the rest of the AutoCAD family of apps, such as AutoCAD 360 and other "Apps in the cloud", and also access to all the AutoCAD and AutoCAD related support materials, forums, and discussions, as well as a certain number of AutoCAD-created documents. For more information about the AutoCAD AppStore Apps, see this article. Contents History AutoCAD LT AutoCAD was developed by a team of commercial software engineers, drafters and artists. ObjectARX ObjectARX (formerly known as ObjectARX API) is a C++ class library developed by Autodesk. The library (download) contains more than 400 utility classes. Objects are used to combine different data and methods and perform various operations on them. For example, ObjectARX provides a small library that is used to detect the window and related geometry of the AutoCAD screen. A simple example of the class can be seen below. It is the library that is used to read and edit the external files and therefore, has to be included with any application using the Autodesk API. Autodesk provides an API to read/edit XML files.

However, the API is not used directly, but it is used as a basis for the ObjectARX library. To use a library that is built on top of the ObjectARX API: Include the.DLL file in the AutoCAD system. Link the.DLL file to the application. Introduction {#s1} ===== Asthma is a heterogeneous disease with varied presentations and severities of airway inflammation. Severe asthma has a worse prognosis compared to mild and moderate asthma. Diagnosis of severe asthma is also fraught with difficulties. To understand the various phenotypes of asthma a careful assessment of the disease is essential. Various lung function tests help in the diagnosis and management of asthma. The main criteria for diagnosis of asthma are based on case history, physical examination, lung function tests and treatment.

Objective {#s2} ===== To review various methods of diagnostic approach to severe asthma.

Methods {#s3} ===== Literature search on PubMed and Medline using keywords asthma, severe asthma, airway inflammation, sputum eosinophilia, hyperresponsiveness, allergen skin test, specific IgE, blood eosinophilia, serum IgE, flow volume loop and peak expiratory flow were searched. Only randomized controlled trials, case-control studies, cohort studies and review articles were considered.

Results {#s4} ===== Characteristic findings on lung function testing, abnormal airway eosinophilic inflammation, elevated serum IgE, elevated peak expiratory flow rate and hyperresponsiveness to the bronchoprovocation tests help in the diagnosis of severe asthma. However, the absolute values are not very specific. There is need for integration of clinical judgment with the objective tests in the diagnosis of severe asthma.

Conclusions {#s5} ===== Characteristic findings on lung function testing, abnormal airway eosinophilic inflammation, elevated serum IgE, elevated peak expiratory flow rate and hyperresponsiveness to the bronchoprovocation tests help in the diagnosis of severe asthma.
